SHAHAR ARIEL

B.Sc. in Software Engineering | Full Stack & Mobile Developer

ShaharAriel95@gmail.com | 050-880-2266 | LinkedIn | GitHub | Website

Languages: Hebrew (native), English (fluent)

Profile

Full Stack Developer with 3+ years of production experience building web and mobile applications, AI-powered products and large-scale assessment platforms. At Tomax, took an AI-powered oral-defense product from proof of concept to commercial launch as its sole developer, and serve as the company's sole mobile developer. Experienced in Vue.js, PHP, React Native, AWS and production LLM integrations.

Technical Skills

- **Languages:** JavaScript (ES6+), PHP, Python, SQL, HTML5, CSS3.
- **Frontend & Mobile:** Vue.js, React Native, Angular, Electron, Tailwind CSS.
- **Backend:** Node.js, Express, REST APIs, MVC, OOP.
- **Databases:** MySQL, MongoDB, DynamoDB, Firestore.
- **Cloud & AI:** AWS (Lambda, ECS, EC2, S3, SQS, CloudWatch, Bedrock), Google Cloud (Cloud Run, Cloud Storage, Cloud Scheduler), Firebase (Auth, Hosting), Azure Speech Services, LLM integration.
- **Tools:** Vitest, Playwright, Git, Docker, Linux, Bash, Twilio, App Store Connect, Google Play Console.

Work Experience

2024 – Present | Tomax – Digital Assessment Platform | *Full Stack Developer*

VivaGo – AI-powered oral-defense product (sole developer)

- Took **VivaGo**, Tomax's AI-powered oral-defense product in which students defend their submitted work in short video answers, from internal proof of concept to **commercial launch**.
- Implemented **AI-powered question and weighted-rubric generation**, per-answer **summaries**, **originality scoring** and **Bloom's taxonomy** classification. Maintain the provider-agnostic speech-to-text integration supporting both **Azure** and **AWS**.
- **Designed the database and the data contracts** connecting VivaGo to Tomax's existing systems (question editor, exam delivery client, and grading and reporting), and built the student defense flow and instructor report on top of them.

Mobile & exam platform

- **Sole developer** of Tomax's **React Native** companion app (iOS & Android), owning the **full lifecycle** from features and maintenance to App Store and Google Play releases. Used for second-camera exam monitoring and scanning handwritten work.
- Developed and maintained a large-scale exam platform (**tens of thousands** of exams and **hundreds of thousands** of candidate exam sessions a year) using **Vue.js**, **Electron**, **PHP**, **MySQL** and **AWS**.
- Integrated AI-driven question generation and rewriting using **AWS Bedrock**, and built **analytics and BI pipelines** over high-volume exam data.

2023 – 2024 | Uniper-Care – Connected Living Platform | *Full Stack Developer (student position)*

- Developed and integrated new platform features using **Node.js**, **Angular**, **Vue.js** and **MongoDB**.
- Built and deployed a **WhatsApp-based** reminder and assistance system for users, and maintained the **Twilio** messaging integration behind it.

2021 – 2022 | Percepto Robotics – Autonomous Inspection Systems | *Technical Support Engineer*

- Beyond the support role, **built an internal tool** that automated pre-shift validation checks for drone fleets. It **became part of the team's daily routine**, cutting manual inspection and speeding up deployment readiness.
- Resolved software and hardware issues for robotics systems deployed worldwide (Linux, Bash).

Projects

Nov 2024 – Present | TsuberMango | *Own product, sole developer*

The system a mango sorting warehouse runs its season on: pallet intake and weighing, shipping certificates and a live cold-room map, used in Hebrew on tablets on the warehouse floor. Built and run end to end with the sorting center; github.com/shahahariel95/TsuberMango.

- **Started on Google Sheets on purpose**, writing into the farmers' own sheets so their workflow didn't change and their data stayed theirs. Once proven, moved to **Firestore** behind a **repository layer**, a swap rather than a rewrite.
- **Real-time sync across tablets** via Firestore listeners instead of WebSockets, so the **Cloud Run** backend can scale to zero.
- **Operational safety**: audit trail, soft delete and restore, versioned shipping certificates, and scheduled **Cloud Storage** backups with a non-destructive restore tool.
- Tested with **Vitest** API tests against Firebase emulators and **Playwright** end-to-end tests on a tablet viewport.

Education

2020 – 2024 | B.Sc. in Software Engineering | *Shenkar College – Faculty of Engineering*

Final Project – SignMyName | Grade 95, top project in the class

Desktop app that teaches children Israeli Sign Language through real-time webcam gesture recognition. Built in a team of three; github.com/Sign-My-Name.

- **Lead developer of the application** (Python, **OpenCV**, **MediaPipe**, **TensorFlow**): real-time hand detection and cropping, CNN inference, and a sliding-window vote for spelling words letter by letter.
- Trained on a **self-collected dataset of 50,000+ images** and evaluated through a **62-participant user study**. Presented and defended the project before an academic committee that included an ML expert.

Military Service

2016 – 2017 | Armored Corps | *Faculty Instructor, Command-and-Control Systems*

- Brought a new command-and-control system into use across the Armored Corps and trained soldiers on it, testing each update with **Elbit Systems** developers before release and turning the changes into training material.

2014 – 2016 | Armored Corps | *Tank Commander*

- Commanded a tank crew in operational combat units.

Volunteering

2020 – 2021 | Mitchashvim | *Volunteer, alongside studies*

- Coordinated the acquisition and distribution of computers.
